CYBERSECURITY

LIBRACYBER

Empower your team to fight cyber threats

BUSINESS SOLUTIONS

CYBERSECURITY

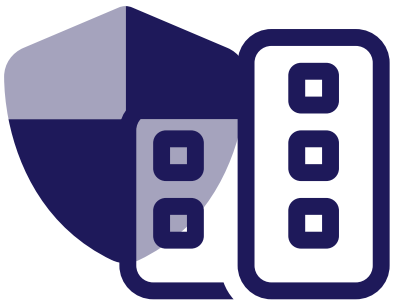

LIBRACYBER

CYBERSECURITY - LIBRACYBER

Your digital peace of mind

Anticipate threats before they affect your business

In a world where **cyberattacks** are on the rise, every company, regardless of size, is a potential target with serious consequences: **financial losses**, **damage to reputation**, and **leaks of sensitive data**. Libracyber helps your teams better understand cyber threats with its awareness platform.

An accessible, scalable, and people-focused solution that makes cybersecurity a strategic asset rather than a constraint. Because a protected company starts with aware employees.

The 4 keys to prevention

A comprehensive approach to reducing human risk

How does Libracyber work ?

Libracyber trains employees directly on their digital practices in their real professional context. Through specific scenarios — such as fake phishing emails or browsing scenarios — it teaches them to recognize threats and adopt the right habits.

Gradually, everyone becomes more vigilant, which greatly reduces risks for the company through four tools:

- **Cybersecurity awareness**
- **Phishing Simulation**
- **Smart Banners**
- **Browser Defender**

CYBERSECURITY - LIBRACYBER

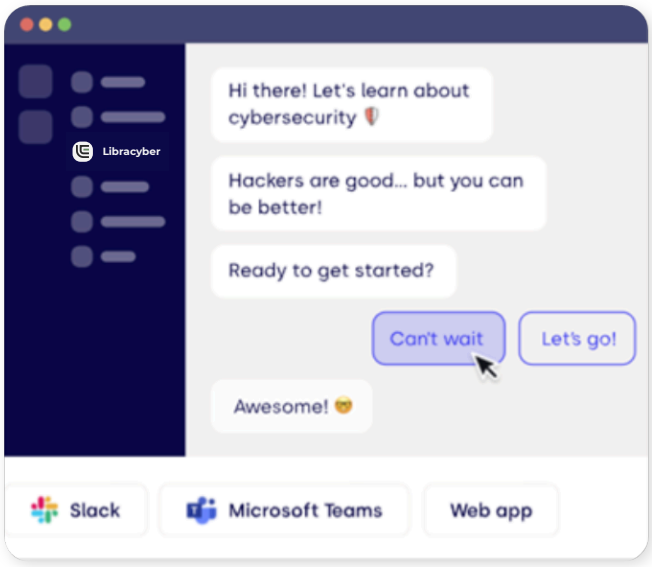

Cybersecurity awareness (1/2)

Alex: made for your best self

The Libracyber platform includes **Alex**, a unique e-learning system based on **interactive chat**. Through short, fun mini-tutorials, your employees learn about **cybersecurity issues** and **best practices**... without feeling overwhelmed or bored.
Accessible directly from their usual tools (Slack, Teams) or via a web browser, Alex fits naturally into their daily routine.

With Alex, awareness becomes a natural habit, not a chore.
Your employees become the company's first-line defenders, while enjoying the experience.

Easy adoption

- Conversational, interactive, and gamified approach.
- Short and engaging content, designed to save time.
- Integration with collaborative tools already used by your teams.

Comprehensive and compliant approach

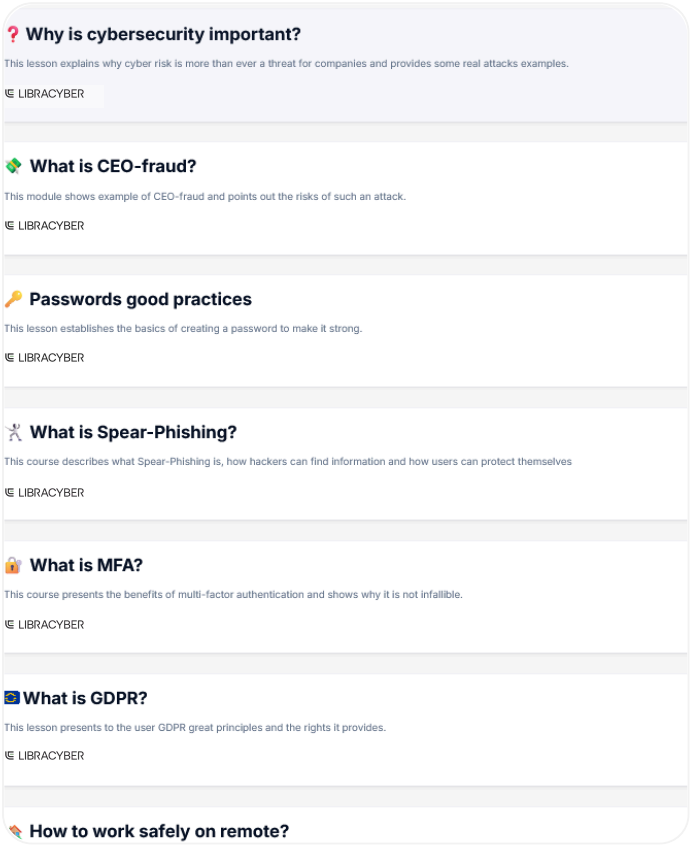

- Training on essential topics: passwords, phishing/SMS, GDPR, etc.
- Content continuously updated to keep pace with evolving threats.
- Quizzes integrated into each tool to reinforce learning.
- Real-time dashboards to measure effectiveness and facilitate your security audits.

CYBERSECURITY - LIBRACYBER

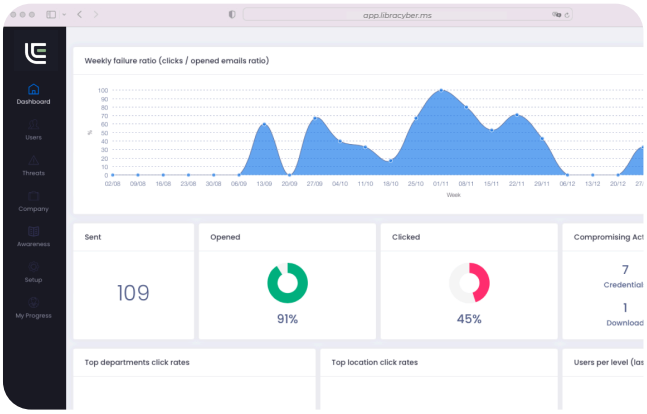

Cybersecurity awareness (2/2)

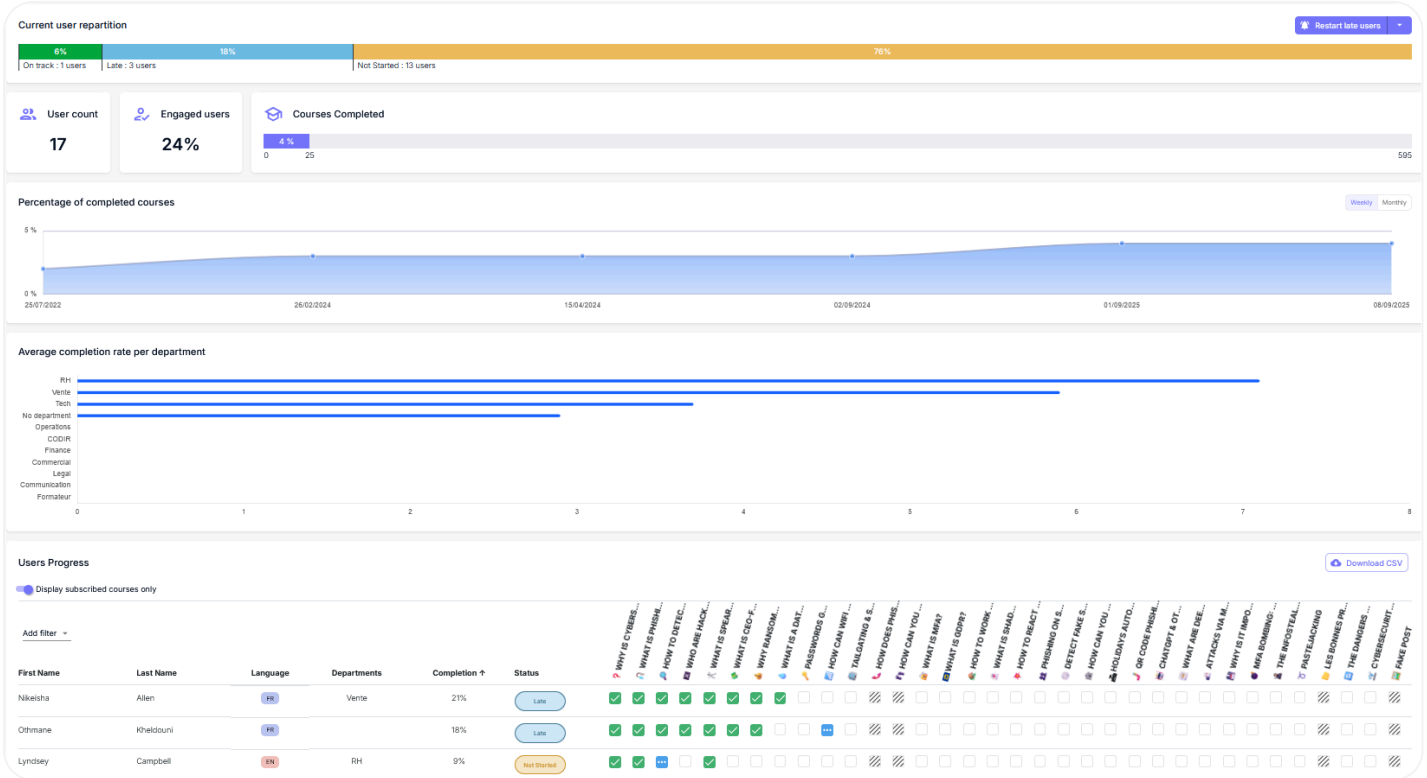

Interface overview

With a quick and intuitive setup, **Alex** can be rapidly deployed internally and offers a wide range of interactive and customizable courses:

Simple and **comprehensive** monitoring:

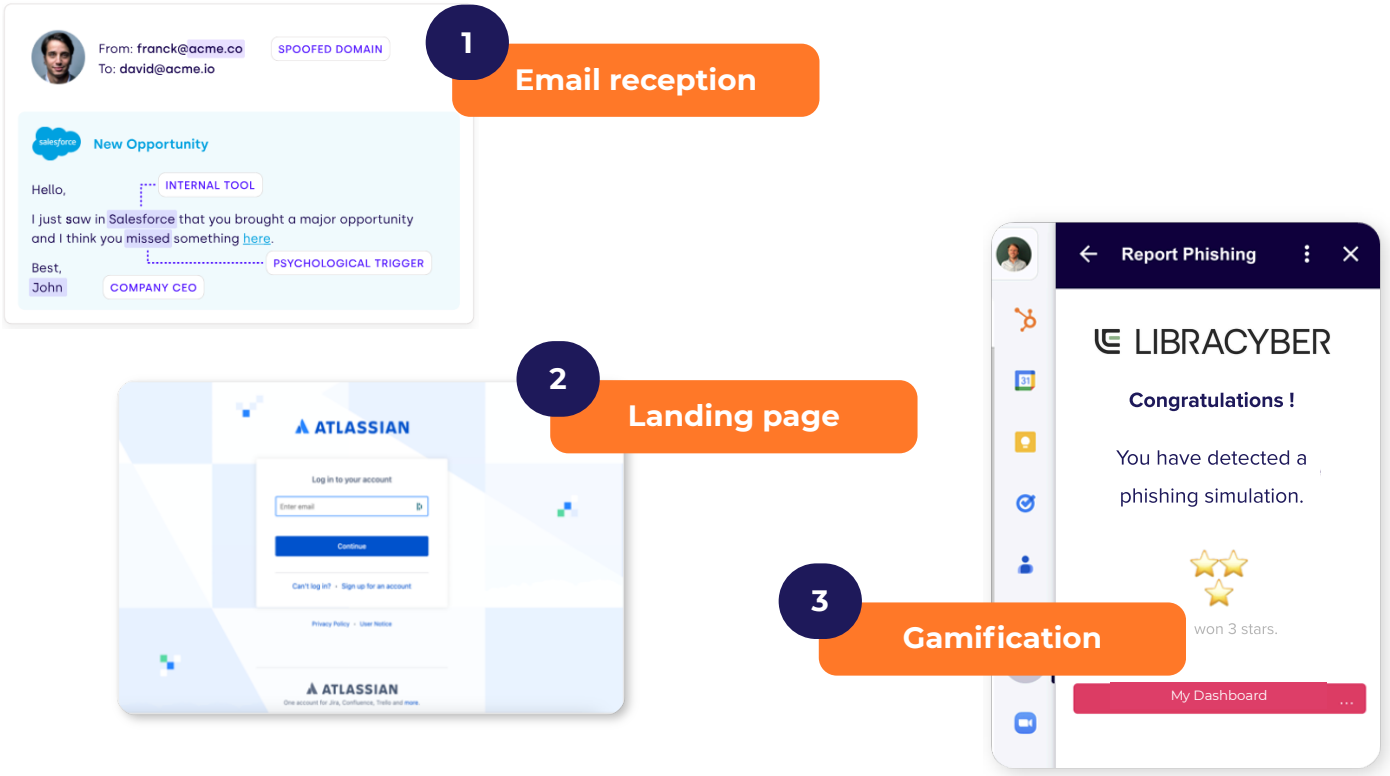

CYBERSECURITY - LIBRACYBER

Phishing Simulation tool (1/2)

Immunize your teams against rushing

Libracyber's **Phishing Simulation tool** trains your employees to recognize and respond to phishing attempts, including targeted attacks (spear phishing). Through realistic and progressive scenarios, your teams develop the right practices while strengthening the company's overall protection.

With this tool, your employees become human security sensors, capable of identifying and reporting threats before they compromise your business.

Easy to adopt in everyday life

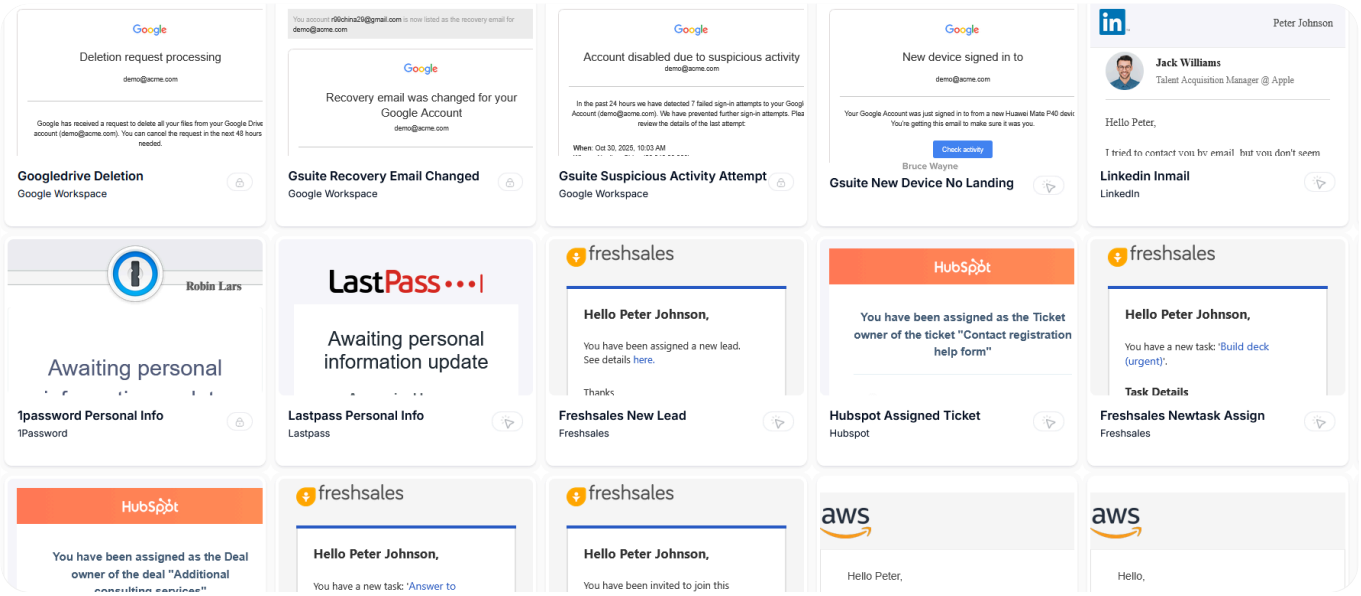

- **Automated and intelligent:** regular mailings, progressive difficulty adapted to users, real-time dashboards, and unlimited personalized campaigns.
- **Real-world conditions:** scenarios contextualized according to job roles and positions, diversified tests (stolen credentials, malicious attachments, abusive permissions), and targeted mailings for greater realism.
- **Easy adoption:** fun, gamified approach, reporting button integrated into the messaging system, immediate micro-tutorials in case of errors for instant learning.

CYBERSECURITY - LIBRACYBER

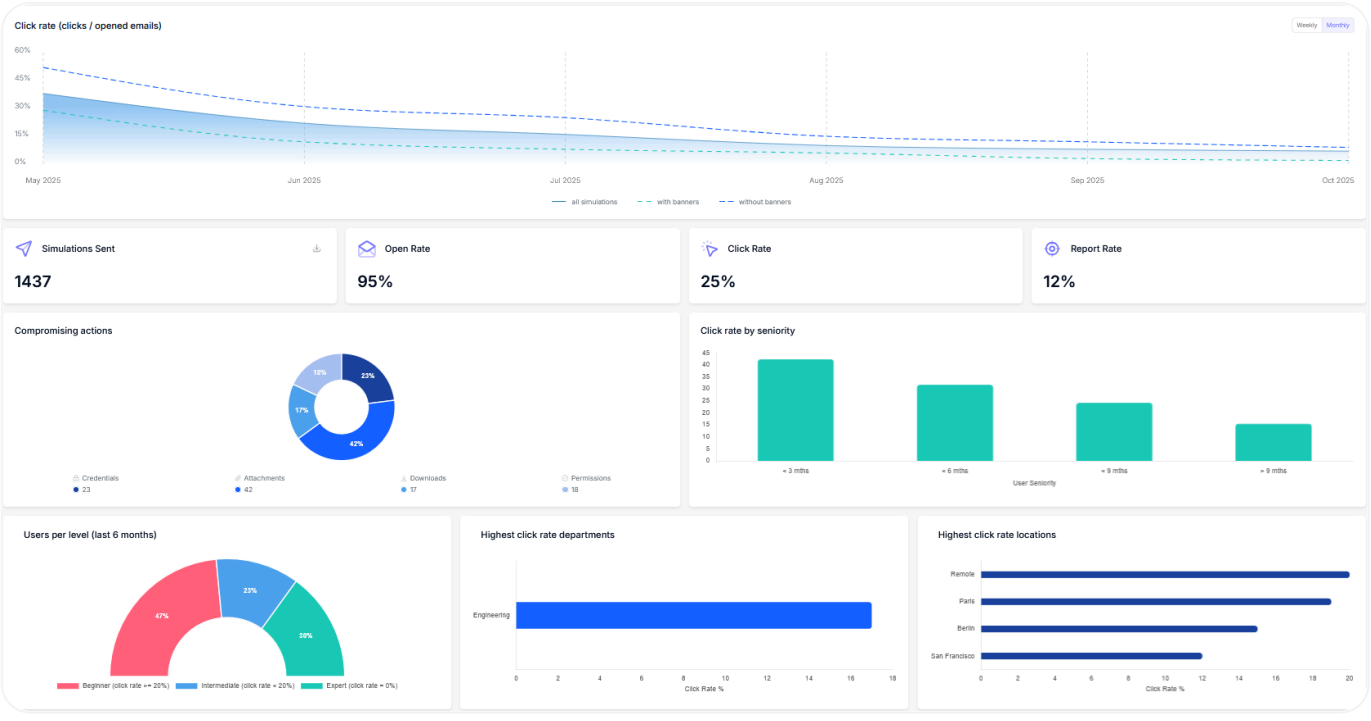

Phishing Simulation tool (2/2)

Interface overview

The Phishing tool offers a **wide range of email templates** to prevent routine from setting in, and allows you to create **custom templates** that are tailored as closely as possible to your company's tools and situations.

With comprehensive tracking of user actions via a dashboard:

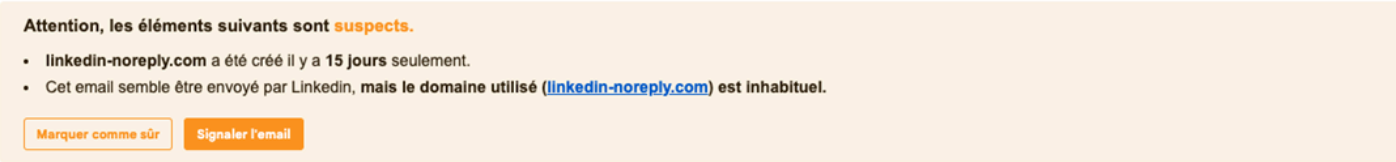

CYBERSECURITY - LIBRACYBER

Smart Banners tool

Develop a sixth sense when dealing with emails.

Libracyber has developed an **intelligent real-time awareness** and **warning system** that acts directly on your incoming emails.
As soon as a suspicious message arrives, **even before it is opened,** the user is alerted through a clear and explicit banner. This simple and effective tool drastically reduces the risks associated with **phishing**, **fraud**, and **identity theft**.

With Smart Banners, every user becomes a security player by learning to instantly recognize threats, while administrators have a comprehensive view of attack attempts.

Adopting progressively the right habits

- **Enhance real-time vigilance**

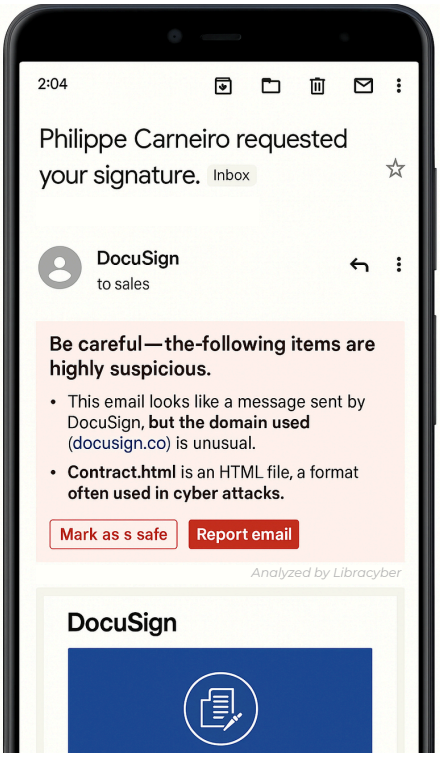

Traditional awareness is no longer enough: Smart Banners integrates a layer of security directly into email to help employees identify threats as they arise.

- **Proactive detection and simplified collaboration**

Banners flag suspicious emails (impersonation, risky attachments, etc.) and allow users to easily report a suspicious message to the SOC with a single click.

- **Seamless deployment and measurable tracking**

Compatible with Microsoft 365, Exchange Online, and Google Workspace, the solution gets installed in just a few clicks and provides detailed dashboards to measure awareness effectiveness.

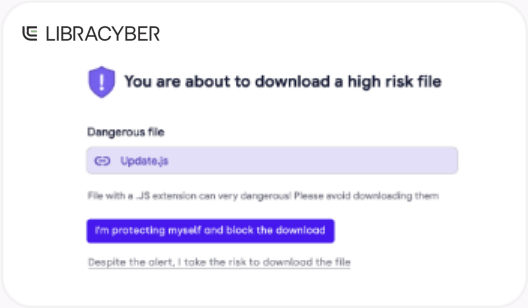

CYBERSECURITY - LIBRACYBER

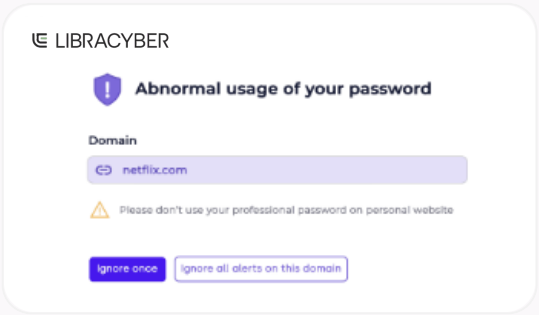

Browser Defender tool

Browsing the Internet should not be a risky endeavor.

With **Browser Defender**, Libracyber protects your employees in real time while they browse the web, detecting threats before they become security incidents. This tool acts as a **cybersecurity co-pilot**, alerting users at the right moment and giving administrators a comprehensive overview of risky behavior.

Browser Defender turns every web session into secure browsing, without any extra effort from users.

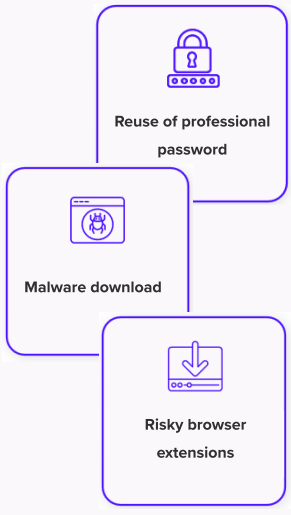

A guardian role...

For the **employees**, **Browser Defender** acts as a sentinel. Whenever a suspicious password is submitted, reuse is detected, or a suspicious download is initiated, a **clear** and **immediate alert** is sent to warn them. Users are thus guided toward **best practices without interrupting their work**, learning to recognize risky behavior while remaining protected. **Your passwords remain secret**: Libracyber only knows their secure fingerprints (Hash).

... and Scout

With Browser Defender, your **administrators** have **complete visibility into the risks associated with web browsing**. The central dashboard provides real-time information on detected fraudulent domains, attempts to steal or reuse passwords, and the complexity of the passwords used by your employees. It also provides accurate tracking of dangerous downloads by type, as well as third-party applications installed and the permissions granted to them. At a glance, you can **identify potential vulnerabilities** and take action before they turn into critical incidents.

CYBERSECURITY- LIBRACYBER

Our support

Choose the Libracyber package that suits your needs.

Ikoula offers Libracyber in **four levels of protection** to empower your teams to combat cyber threats, combining a **continuous training program** with **real-time protection.**

	Cyber Training	Smart Mail	Web Secure	360 Full Libracyber
Cybersecurity awareness	✓	✓	✓	✓
Phishing Simulation	✓	✓	✓	✓
Smart Banners	x	✓	x	✓
Browser Defender	x	x	✓	✓

- **Cyber Training Pack – "Cybersecurity Training"**

Includes the phishing simulator and Alex e-learning training course.

- **Smart Mail Pack – "Cyber Training + Smart Banners"**

In addition to the Cyber Training pack, includes the Smart Banners module, which displays real-time alerts in emails.

- **Web Secure Pack – "Cyber Training + Browser Defender"**

Cyber Training Pack enhanced with the Browser Defender module, which directly protects browsing in the browser.

- **360 Pack – "Full Libracyber"**

Take advantage of all four modules for a comprehensive approach that combines training, messaging prevention, and browsing protection.

CYBERSECURITY- LIBRACYBER

Our support

Libracyber, tested and approved at Ikoula.

At **Ikoula**, we trust **Libracyber** to protect our teams and infrastructure. We chose it internally because **we know how essential cybersecurity is** for a hosting provider like us, which guarantees the availability and confidentiality of its customers' data.

Shared experience

Our profession puts us on the front line of digital threats every day. **This experience shapes our high standards** and **vigilance**, and it is precisely this expertise that we make available to our customers through Libracyber. Offering this solution is therefore not simply a commercial decision: it is the natural continuation of our long-standing commitment to security.

With **Libracyber**, we combine the **reliability of an innovative technological solution** with the personal touch of **human support**. Because we truely believe that effective protection relies not only on tools, but also on the ability to guide, educate, and reassure. This combination makes all the difference: resilient cybersecurity, embodied and applied on a daily basis, by and for **Ikoula**.

*“Because even the best cybersecurity is worthless without expertise, we make **Libracyber** your everyday partner.”*
